

Introductory College Chemistry

This course covers material usually taught in a one-term, introductory chemistry course. By default, the topics listed below are all available. However, instructors can customize the course to align with their teaching goals using *any* topics from the complete ALEKS curriculum.

Curriculum Show All (231 topics + 602 additional topics)

- Math and Physics (22 topics)
 - ◆ Mathematics (9 topics)
 - ◇ Integer multiplication and division
 - ◇ Simplifying a fraction
 - ◇ Equivalent fractions
 - ◇ Signed fraction multiplication: Basic
 - ◇ Signed fraction division
 - ◇ Writing expressions using exponents
 - ◇ Introduction to exponents
 - ◇ Ordering numbers with positive exponents
 - ◇ Square root of a perfect square
 - ◆ Algebra Expressions (4 topics)
 - ◇ Introduction to the product rule of exponents
 - ◇ Introduction to the product rule with negative exponents
 - ◇ Introduction to the quotient rule of exponents
 - ◇ Introduction to the power of a product rule of exponents
 - ◆ Graphing Equations (2 topics)
 - ◇ Classifying slopes given graphs of lines
 - ◇ Graphing a line through a given point with a given slope
 - ◆ Graphing Data (2 topics)
 - ◇ Constructing a scatter plot
 - ◇ Mean of a data set
 - ◆ Electrostatics (5 topics)
 - ◇ Understanding that opposite charges attract and like charges repel
 - ◇ Understanding net electrical charge
 - ◇ Understanding how electrostatic force scales with charge and separation
 - ◇ Understanding how electrostatic forces cancel
 - ◇ Sketching polarization induced by a nearby charge
- Measurement and Matter (41 topics)
 - ◆ Scientific Notation (3 topics)
 - ◇ Multiplication of a decimal by a power of ten
 - ◇ Division of a decimal by a power of ten
 - ◇ Converting between decimal numbers and numbers written in scientific notation
 - ◆ SI Units (7 topics)
 - ◇ Knowing the dimension of common scientific units of measurement
 - ◇ Understanding the purpose of SI prefixes
 - ◇ Knowing the value of an SI prefix as a power of 10
 - ◇ Interconversion of prefixed and base SI units
 - ◇ Interconversion of prefixed SI units

- ◇ Interconverting whole degree temperatures in Celsius and kelvins
 - ◇ Interconverting temperatures in Celsius and Fahrenheit
- ◆ Measurement Math (1 topics)
 - ◇ Simplifying unit expressions
- ◆ Measurement Uncertainty (7 topics)
 - ◇ Counting significant digits
 - ◇ Rounding to a given significant digit
 - ◇ Counting significant digits when measurements are added or subtracted
 - ◇ Counting significant digits when measurements are multiplied or divided
 - ◇ Adding or subtracting and multiplying or dividing measurements
 - ◇ Reading a measurement from an analog instrument
 - ◇ Calculating absolute and relative error
- ◆ Quantitative Problem Solving (5 topics)
 - ◇ Naming components of the scientific method
 - ◇ Setting up a one-step unit conversion
 - ◇ Setting up a unit reprefix conversion
 - ◇ Predicting the units of the solution to a basic quantitative problem
 - ◇ Setting up the math for a one-step problem with unit conversion
- ◆ Mass, Volume and Density (5 topics)
 - ◇ Estimating the volume in liters of a square prism object
 - ◇ Finding the side length of a cube from its volume in liters
 - ◇ Understanding the relationship between mass, volume, and density
 - ◇ Calculating mass density
 - ◇ Solving applied density problems
- ◆ Substances (2 topics)
 - ◇ Distinguishing mixtures from pure substances through physical properties
 - ◇ Naming common laboratory separation techniques
- ◆ Atomic Theory (5 topics)
 - ◇ Distinguishing elements and compounds
 - ◇ Distinguishing compounds and mixtures
 - ◇ Classifying substances from a sketch
 - ◇ Distinguishing chemical and physical change
 - ◇ Distinguishing solid, liquid and gas phases of a pure substance
- ◆ Chemical Elements (6 topics)
 - ◇ Names and symbols of important elements
 - ◇ Reading a Periodic Table entry
 - ◇ Recognizing element families
 - ◇ Organization of the Periodic Table
 - ◇ Using the Periodic Table to identify similar elements
 - ◇ Distinguishing a metal from a nonmetal by physical properties
- Atoms, Ions and Molecules (19 topics)
 - ◆ Atomic Structure (6 topics)
 - ◇ Identifying the parts of an atom
 - ◇ Counting protons and electrons in atoms and atomic ions
 - ◇ Predicting the ions formed by common main-group elements
 - ◇ Isotopes
 - ◇ Counting valence electrons in a neutral atom
 - ◇ Counting the electron shells in a neutral atom
 - ◆ Chemical Compounds (5 topics)
 - ◇ Counting the number of atoms in a formula unit
 - ◇ Writing a chemical formula given a molecular model
 - ◇ Writing a chemical formula given a chemical structure
 - ◇ Understanding the prefixes used in naming binary compounds

- ◇ Naming binary covalent compounds
- ◆ Ionic Compounds (8 topics)
 - ◇ Predicting whether a compound is ionic or molecular
 - ◇ Distinguishing an ionic from a molecular compound by physical properties
 - ◇ Predicting the formula of binary ionic compounds
 - ◇ Naming binary ionic compounds
 - ◇ Deducing the ions in a binary ionic compound from its empirical formula
 - ◇ Deducing the empirical formula of a binary ionic compound from its name
 - ◇ Identifying common polyatomic ions
 - ◇ Naming hydrates
- Chemical Reactions (31 topics)
 - ◆ Moles and Molar Mass (2 topics)
 - ◇ Calculating and using the molar mass of elements
 - ◇ Finding molar mass from chemical formulae
 - ◆ Chemical Equations (5 topics)
 - ◇ Stoichiometric coefficients
 - ◇ Balancing chemical equations with noninterfering coefficients
 - ◇ Balancing chemical equations with interfering coefficients
 - ◇ Writing a chemical equation from a description of the reaction
 - ◇ Writing a chemical equation from a molecular movie
 - ◆ Reaction Stoichiometry (5 topics)
 - ◇ Using a chemical equation to find moles of product from moles of reactant
 - ◇ Solving for a reactant using a chemical equation
 - ◇ Identifying the limiting reactant in a drawing of a mixture
 - ◇ Solving moles-to-moles limiting reactant problems
 - ◇ Understanding theoretical, actual, and percent yield
 - ◆ Solution Stoichiometry (5 topics)
 - ◇ Calculating molarity using solute moles
 - ◇ Calculating molarity using solute mass
 - ◇ Using molarity to find solute mass and solution volume
 - ◇ Dilution
 - ◇ Solving for a reactant in solution
 - ◆ Precipitation (2 topics)
 - ◇ Identifying the correct sketch of a compound in aqueous solution
 - ◇ Writing net ionic equations
 - ◆ Acid–Base Reactions (3 topics)
 - ◇ Identifying acids and bases by their chemical formula
 - ◇ Predicting the products of a neutralization reaction
 - ◇ Determining the volume of base needed to titrate a given mass of acid
 - ◆ Oxidation–Reduction Reactions (5 topics)
 - ◇ Assigning oxidation numbers
 - ◇ Recognizing reduction and oxidation
 - ◇ Identifying oxidizing and reducing agents
 - ◇ Predicting whether simple electrochemical reactions happen
 - ◇ Solving a redox titration problem
 - ◆ Predicting Products (4 topics)
 - ◇ Identifying combination, decomposition, single and double displacement reactions
 - ◇ Identifying precipitation, combustion and acid–base reactions
 - ◇ Predicting the products of a combustion reaction
 - ◇ Predicting products from a general statement about reactivity
- Thermochemistry (5 topics)
 - ◆ Energy (2 topics)
 - ◇ Understanding how kinetic energy scales with mass and speed

- ◇ Using conservation of energy to predict the qualitative exchange of kinetic and potential energy
- ◆ Reaction Enthalpy (3 topics)
 - ◇ Using the general properties of reaction enthalpy
 - ◇ Calculating the heat of reaction from molar reaction enthalpy and the mass of a reactant
 - ◇ Calculating the heat of reaction from bond energies and Lewis structures
- Electronic Structure and Chemical Bonding (27 topics)
 - ◆ Electron Configuration (5 topics)
 - ◇ Interpreting the electron configuration of a neutral atom
 - ◇ Interpreting the electron configuration of a neutral atom in noble-gas notation
 - ◇ Writing the electron configuration of a neutral atom with s and p electrons only
 - ◇ Writing the electron configuration of an atom using the Periodic Table
 - ◇ Identifying quantum mechanics errors in electron configurations
 - ◆ Electronic Properties of The Elements (5 topics)
 - ◇ Identifying s, p, d and f block elements
 - ◇ Identifying elements with a similar valence electron configuration
 - ◇ Understanding the definitions of ionization energy and electron affinity
 - ◇ Understanding periodic trends in atomic size
 - ◇ Understanding periodic trends in atomic ionizability
 - ◆ Atomic Spectroscopy (4 topics)
 - ◇ Understanding the organization of the electromagnetic spectrum
 - ◇ Interconverting the wavelength and frequency of electromagnetic radiation
 - ◇ Interconverting wavelength, frequency and photon energy
 - ◇ Predicting the qualitative features of a line spectrum
 - ◆ Lewis Structures (6 topics)
 - ◇ Counting bonding and nonbonding electron pairs in a Lewis structure
 - ◇ Deciding whether a Lewis structure satisfies the octet rule
 - ◇ Writing Lewis structures for diatomic molecules
 - ◇ Predicting the single-bonded molecular compounds formed by two elements
 - ◇ Predicting the compound formed by two main group elements
 - ◇ Writing Lewis structures for a molecule with one central atom and no octet-rule exceptions
 - ◆ Chemical Bonds (3 topics)
 - ◇ Predicting the relative electronegativities of atoms
 - ◇ Predicting relative bond polarity
 - ◇ Predicting the relative length and energy of chemical bonds
 - ◆ Molecules (4 topics)
 - ◇ Predicting the arrangement of electron groups around the central atom of a molecule
 - ◇ Predicting bond angles in a small organic molecule
 - ◇ Naming common chemical groups
 - ◇ Identifying common chemical groups in a Lewis structure
- States of Matter (28 topics)
 - ◆ Gas Laws (4 topics)
 - ◇ Understanding pressure equilibrium and atmospheric pressure
 - ◇ Understanding Boyle's Law
 - ◇ Solving applications of Boyle's Law
 - ◇ Using Charles's Law
 - ◆ Mixtures and Reactions of Gases (2 topics)
 - ◇ Calculating partial pressure of a gas from a sketch
 - ◇ Calculating the mass of a gas collected over water
 - ◆ Kinetic Theory (3 topics)
 - ◇ Understanding how average molecular speed scales with temperature and molar mass
 - ◇ Interpreting a graph of molecular speed distribution
 - ◇ Understanding how molecular collision rate scales with temperature and volume
 - ◆ Intermolecular Forces (5 topics)

- ◇ Predicting the strength of intermolecular forces from an electrostatic potential map
- ◇ Identifying hydrogen–bonding interactions between molecules
- ◇ Identifying the intermolecular forces between atoms, ions and molecules
- ◇ Predicting the relative strength of the dispersion force between molecules
- ◇ Predicting the relative boiling points of pure substances
- ◆ Liquids (3 topics)
 - ◇ Identifying important physical properties of liquids
 - ◇ Understanding consequences of important physical properties of liquids
 - ◇ Relating vapor pressure to vaporization
- ◆ Solids (1 topics)
 - ◇ Predicting the type of solid formed by a compound
- ◆ Phase Change (3 topics)
 - ◇ Using heat of fusion or vaporization to find the heat needed to melt or boil a substance
 - ◇ Using a phase diagram to predict phase at a given temperature and pressure
 - ◇ Identifying phase transitions on a heating curve
- ◆ Solution Composition (4 topics)
 - ◇ Calculating mass concentration
 - ◇ Using mass concentration to find solute mass and solution volume
 - ◇ Solving applied mass concentration problems
 - ◇ Solving applied dilution problems
- ◆ Solubility (2 topics)
 - ◇ Applying like dissolves like
 - ◇ Understanding how solubility varies with temperature and pressure
- ◆ Ideal Solutions (1 topics)
 - ◇ Predicting relative boiling point elevations and freezing point depressions
- Kinetics and Equilibrium (8 topics)
 - ◆ Rates of Reaction (2 topics)
 - ◇ Predicting how reaction rate varies with pressure, concentration and temperature
 - ◇ Calculating average and instantaneous reaction rate from a graph of concentration versus time
 - ◆ Dynamic Equilibrium (1 topics)
 - ◇ Using Le Chatelier's Principle to predict the result of changing temperature
 - ◆ Equilibrium Constants and Expressions (3 topics)
 - ◇ Writing a concentration equilibrium constant expression
 - ◇ Calculating an equilibrium constant from an equilibrium composition
 - ◇ Using an equilibrium constant to predict the direction of spontaneous reaction
 - ◆ Equilibrium Composition (2 topics)
 - ◇ Recognizing equilibrium from a sketch
 - ◇ Predicting equilibrium composition from a sketch
- Acids and Bases (15 topics)
 - ◆ Concepts of Acidity (5 topics)
 - ◇ Identifying acids and bases by their reaction with water
 - ◇ Understanding the difference between strong and weak acids
 - ◇ Identifying Bronsted–Lowry acids and bases
 - ◇ Identifying strong or weak acids and bases from a sketch
 - ◇ Finding the conjugate of an acid or base
 - ◆ Acid–Base Nomenclature (1 topics)
 - ◇ Recognizing common acids and bases
 - ◆ pH (4 topics)
 - ◇ Interconverting pH and hydronium ion concentration
 - ◇ Making qualitative estimates of pH change
 - ◇ Calculating the pH of a strong acid solution
 - ◇ Calculating the pH of a strong base solution
 - ◆ Weak Acids and Bases (3 topics)

- ◇ Writing an acid dissociation constant expression
 - ◇ Determining the strength of acids from a sketch
 - ◇ Interconverting K_a and pK_a
- ◆ Buffers (2 topics)
 - ◇ Identifying the major species in weak acid or weak base equilibria
 - ◇ Calculating the pH of a buffer
- Chemistry of the Elements (8 topics)
 - ◆ Periodic Trends (4 topics)
 - ◇ Understanding main-group periodic trends in metallicity
 - ◇ Predicting the most positive and negative oxidation states of main-group elements
 - ◇ Predicting the oxide formed by a main-group element
 - ◇ Predicting the type of bonding in a main-group element
 - ◆ Properties of Groups (4 topics)
 - ◇ Predicting the products of the reaction of a Group 1A or 2A metal with water
 - ◇ Predicting the products of the reaction of a Group 1A or 2A metal with oxygen
 - ◇ Predicting the products of the reaction of elements at either end of the Periodic Table
 - ◇ Ordering the melting points of elements at either end of the Periodic Table
- Nuclear Chemistry (9 topics)
 - ◆ Nuclear Reactions (5 topics)
 - ◇ Interpreting the symbol for a nuclide
 - ◇ Writing the symbols in a nuclear chemical equation
 - ◇ Balancing a nuclear chemical equation
 - ◇ Writing the equation for a typical radioactive decay
 - ◇ Calculating the energy change in a nuclear reaction from the mass change
 - ◆ Radioactive Decay (3 topics)
 - ◇ Knowing the properties of the common types of nuclear radiation
 - ◇ Understanding the common modes of radioactive decay
 - ◇ Understanding radioactive half life
 - ◆ Nuclear Technology (1 topics)
 - ◇ Identifying important types of nuclear medicine procedure
- Organic Chemistry (18 topics)
 - ◆ Physical Properties of Organic Compounds (1 topics)
 - ◇ Identifying organic compounds
 - ◆ Drawing Organic Molecules (4 topics)
 - ◇ Interpreting condensed chemical structures
 - ◇ Interpreting the skeletal structure of a neutral organic molecule
 - ◇ Drawing a skeletal structure from a simple condensed structure
 - ◇ Recognizing different skeletal structures
 - ◆ Principles of Organic Nomenclature (3 topics)
 - ◇ Naming normal alkanes
 - ◇ Understanding the basic descriptive vocabulary of hydrocarbons
 - ◇ Understanding the basic descriptive vocabulary of molecules with functional groups
 - ◆ Organic Isomerism (1 topics)
 - ◇ Identifying constitutional isomers
 - ◆ Principles of Organic Reactivity (1 topics)
 - ◇ Identifying oxidation and reduction in organic reactions
 - ◆ Alkanes (2 topics)
 - ◇ Naming and drawing normal alkanes.
 - ◇ Naming and drawing simple cyclic alkanes
 - ◆ Unsaturated Hydrocarbons (2 topics)
 - ◇ Naming and drawing linear alkenes with one double bond
 - ◇ Identifying cis/trans isomerism in a small condensed structure
 - ◆ Reactions of Hydrocarbons (1 topics)

- ◇ Predicting the reactants or products of alkene hydrogenation
- ◆ Alcohols, Thiols, and Ethers (1 topics)
 - ◇ Naming and drawing alcohols without alkyl side groups
- ◆ Carboxylic Acids and Derivatives (2 topics)
 - ◇ Naming and drawing carboxylic acids
 - ◇ Understanding common names of carboxylic acids and derivatives
- Other Topics Available(*) (602 additional topics)
 - ◆ Math and Physics (98 topics)
 - ◇ Signed fraction addition or subtraction: Basic
 - ◇ Exponents and fractions
 - ◇ Introduction to inequalities
 - ◇ Introduction to order of operations
 - ◇ Evaluating expressions with exponents of zero
 - ◇ Evaluating an expression with a negative exponent: Whole number base
 - ◇ Evaluating an expression with a negative exponent: Positive fraction base
 - ◇ Complex fraction without variables: Problem type 1
 - ◇ Introduction to square root multiplication
 - ◇ Absolute value of a number
 - ◇ Evaluating a quadratic expression: Integers
 - ◇ Combining like terms: Integer coefficients
 - ◇ Combining like terms in a quadratic expression
 - ◇ Distributive property: Integer coefficients
 - ◇ Using distribution and combining like terms to simplify: Univariate
 - ◇ Product rule with positive exponents: Univariate
 - ◇ Simplifying a ratio of univariate monomials
 - ◇ Quotient rule with negative exponents: Problem type 1
 - ◇ Power and quotient rules with positive exponents
 - ◇ Rewriting an algebraic expression without a negative exponent
 - ◇ Squaring a binomial: Univariate
 - ◇ Multiplying binomials with leading coefficients greater than 1
 - ◇ Multiplying rational expressions involving multivariate monomials
 - ◇ Complex fraction involving univariate monomials
 - ◇ Square root of a perfect square monomial
 - ◇ Writing a one-step expression for a real-world situation
 - ◇ Writing a multi-step equation for a real-world situation
 - ◇ Identifying solutions to a linear equation in one variable: Two-step equations
 - ◇ Identifying solutions to a linear equation in two variables
 - ◇ Additive property of equality with integers
 - ◇ Additive property of equality with a negative coefficient
 - ◇ Multiplicative property of equality with signed fractions
 - ◇ Solving a multi-step equation given in fractional form
 - ◇ Solving a linear equation with several occurrences of the variable: Fractional forms with monomial numerators
 - ◇ Solving a rational equation that simplifies to linear: Denominator $x+a$
 - ◇ Solving a proportion of the form $a/(x+b) = c/x$
 - ◇ Solving for a variable in terms of other variables using addition or subtraction with division
 - ◇ Solving for a variable in terms of other variables in a linear equation with fractions
 - ◇ Solving a word problem with two unknowns using a linear equation
 - ◇ Additive property of inequality with integers
 - ◇ Solving a two-step linear inequality: Problem type 2
 - ◇ Solving a quadratic equation using the square root property: Decimal answers, basic

- ◇ Solving a quadratic equation using the square root property: Decimal answers, advanced
- ◇ Applying the quadratic formula: Decimal answers
- ◇ Discriminant of a quadratic equation
- ◇ Introduction to solving a radical equation
- ◇ Solving a radical equation that simplifies to a linear equation: One radical, basic
- ◇ Graphing a line given its equation in slope–intercept form: Fractional slope
- ◇ Writing the equation of a line given the y–intercept and another point
- ◇ Finding slope given the graph of a line on a grid
- ◇ Finding slope given two points on a line
- ◇ Finding the slope and y–intercept of a line given its equation in the form $Ax + By = C$
- ◇ Finding x– and y–intercepts given the graph of a line on a grid
- ◇ Finding x– and y–intercepts of a line given the equation: Advanced
- ◇ Sketching the line of best fit
- ◇ Scatter plots and correlation
- ◇ Approximating the equation of a line of best fit and making predictions
- ◇ Classifying linear and nonlinear relationships from scatter plots
- ◇ Linear relationship and the correlation coefficient
- ◇ Choosing a graph to fit a narrative: Basic
- ◇ Choosing a graph to fit a narrative: Advanced
- ◇ Constructing a histogram for numerical data
- ◇ Finding the mean of a symmetric distribution
- ◇ Population standard deviation
- ◇ Word problem involving calculations from a normal distribution
- ◇ Evaluating a logarithmic expression
- ◇ Solving an equation of the form $\log_b a = c$
- ◇ Basic properties of logarithms
- ◇ Expanding a logarithmic expression: Problem type 1
- ◇ Expanding a logarithmic expression: Problem type 2
- ◇ Writing an expression as a single logarithm
- ◇ Evaluating an exponential function with base e that models a real–world situation
- ◇ Converting between common logarithmic and exponential equations
- ◇ Converting between natural logarithmic and exponential equations
- ◇ Solving a multi–step equation involving natural logarithms
- ◇ Solving an exponential equation by using logarithms: Decimal answers, basic
- ◇ Solving an exponential equation by using natural logarithms: Decimal answers
- ◇ Graphing an exponential function and its asymptote: $f(x) = a(e)^{x-b} + c$
- ◇ Finding an angle measure of a triangle given two angles
- ◇ Finding an angle measure for a triangle with an extended side
- ◇ Finding an angle measure for a triangle sharing a side with another triangle
- ◇ Pythagorean Theorem
- ◇ Sine, cosine, and tangent ratios: Numbers for side lengths
- ◇ Using the Pythagorean Theorem to find a sine, cosine, or tangent ratio in a right triangle
- ◇ Using a trigonometric ratio to find a side length in a right triangle
- ◇ Using a trigonometric ratio to find an angle measure in a right triangle
- ◇ Solving a right triangle
- ◇ Finding the magnitude and direction of a vector given its graph
- ◇ Finding the components of a vector given its graph
- ◇ Finding the component of a vector along another vector
- ◇ Calculating gravitational potential energy
- ◇ Using conservation of energy with gravitational potential energy
- ◇ Using conservation of energy with electrostatic potential energy
- ◇ Understanding how electrostatic potential energy scales with charge and separation
- ◇ Calculating the magnitude of an electrostatic force using Coulomb's Law

- ◇ Understanding that electrostatic forces add as vectors
- ◇ Understanding how electrostatic energy scales with charge and separation
- ◇ Calculating electrostatic energy using Coulomb's Law
- ◆ Measurement and Matter (28 topics)
 - ◇ Multiplying and dividing numbers written in scientific notation
 - ◇ Calculating positive powers of scientific notation
 - ◇ Finding negative powers of scientific notation
 - ◇ Interconverting compound SI units
 - ◇ Interconverting derived SI units
 - ◇ Interconverting temperatures in Celsius and Kelvins
 - ◇ Addition and subtraction of measurements
 - ◇ Multiplication and division of measurements
 - ◇ One step dosage calculations
 - ◇ Dosage calculations using patient weight
 - ◇ Dosage rate calculations
 - ◇ Distinguishing accuracy and precision
 - ◇ Setting up a unit conversion
 - ◇ Deducing the unit missing from the solution to a basic quantitative problem
 - ◇ Setting up the solution to a basic quantitative problem
 - ◇ Identifying errors in the solution to a basic quantitative problem
 - ◇ Setting up the math for a one-step quantitative problem
 - ◇ Setting up the math for a two-step quantitative problem
 - ◇ Estimating the volume in liters of a spherical object
 - ◇ Estimating the volume in liters of a cylindrical object
 - ◇ Calculating volume by combining the volume of simple shapes
 - ◇ Using mass density to find mass or volume
 - ◇ Distinguishing physical and chemical properties by a macroscopic description
 - ◇ Distinguishing extensive and intensive properties
 - ◇ Using the Law of Constant Composition
 - ◇ Using the Law of Multiple Proportions
 - ◇ Understanding periods and groups of the Periodic Table
 - ◇ Standard chemical and physical states of the elements
- ◆ Atoms, Ions and Molecules (15 topics)
 - ◇ Counting the number of protons and electrons in a neutral atom
 - ◇ Finding isoprotonic atoms
 - ◇ Finding isoelectronic atoms
 - ◇ Finding atomic mass from isotope mass and natural abundance
 - ◇ Finding isotope mass or natural abundance from atomic mass
 - ◇ Counting valence electrons in an atomic ion
 - ◇ Drawing the Lewis dot diagram of a main group atom or common atomic ion
 - ◇ Understanding the difference between a molecular and empirical formula
 - ◇ Predicting ionic compounds formed by two elements
 - ◇ Predicting and naming ionic compounds formed by two elements
 - ◇ Predicting the formula of ionic compounds with common polyatomic ions
 - ◇ Naming ionic compounds with common polyatomic ions
 - ◇ Deducing the ions in a polyatomic ionic compound from its empirical formula
 - ◇ Identifying oxoanions
 - ◇ Naming ionic compounds with common oxoanions
- ◆ Chemical Reactions (29 topics)
 - ◇ Using the Avogadro Number
 - ◇ Calculating and using the molar mass of diatomic elements
 - ◇ Calculating and using the molar mass of heterodiatomc compounds
 - ◇ Finding mole ratios from chemical formulae

- ◇ Finding chemical formulae from a mole ratio
- ◇ Interconverting number of atoms and mass of compound
- ◇ Finding mass percent from chemical formulae
- ◇ Solving applied mass percent problems
- ◇ Elemental analysis of binary compounds
- ◇ Elemental analysis
- ◇ Finding a molecular formula from molar mass and elemental analysis of binary compounds
- ◇ Finding a molecular formula from molar mass and elemental analysis
- ◇ Combustion analysis
- ◇ Writing the net equation for a sequence of reactions
- ◇ Limiting reactants
- ◇ Theoretical yield of chemical reactions
- ◇ Percent yield of chemical reactions
- ◇ Reaction sequence stoichiometry
- ◇ Using molarity to find solute moles and solution volume
- ◇ Calculating ion molarity using solute mass
- ◇ Solving limiting reactant problems in solution
- ◇ Predicting the products of dissolution
- ◇ Predicting precipitation
- ◇ Determining the molar mass of an acid by titration
- ◇ Standardizing a base solution by titration
- ◇ Identifying oxidized and reduced reactants in a metal–nonmetal reaction
- ◇ Identifying oxidized and reduced reactants in a single–displacement reaction
- ◇ Predicting the products of a single displacement reaction involving hydrogen
- ◇ Predicting the products of a gas–evolving double displacement reaction
- ◆ Thermochemistry (18 topics)
 - ◇ Calculating kinetic energy
 - ◇ Calculating pressure–volume work
 - ◇ Understanding the definitions of heat and work
 - ◇ Understanding the definition of enthalpy
 - ◇ Interconverting calories and joules
 - ◇ Calculating specific heat capacity
 - ◇ Using specific heat capacity to find heat
 - ◇ Using specific heat capacity to find temperature change
 - ◇ Calculating molar heat capacity
 - ◇ Solving a basic calorimetry problem
 - ◇ Finding the equilibrium temperature when substances at different temperatures mix
 - ◇ Calculating heat of reaction from constant–pressure calorimetry data
 - ◇ Calculating heat of reaction from bomb calorimetry data
 - ◇ Using Hess's Law to calculate net reaction enthalpy
 - ◇ Writing a standard formation reaction
 - ◇ Calculating a molar heat of reaction from formation enthalpies
 - ◇ Solving combustion thermochemistry problems
 - ◇ Calculating the heat of reaction from bond energies
- ◆ Electronic Structure and Chemical Bonding (46 topics)
 - ◇ Understanding the meaning of a de Broglie wavelength
 - ◇ Finding the minimum uncertainty in a position or velocity measurement
 - ◇ Interpreting the radial probability distribution of an orbital
 - ◇ Interpreting the angular probability distribution of an orbital
 - ◇ Recognizing s and p orbitals
 - ◇ Deducing n and l from a subshell label
 - ◇ Deciding the relative energy of electron subshells
 - ◇ Drawing a box diagram of the electron configuration of an atom

- ◇ Deducing the allowed quantum numbers of an atomic electron
- ◇ Calculating the capacity of electron subshells
- ◇ Knowing the subshells of an electron shell
- ◇ Writing the electron configuration of a neutral atom with a filled d subshell
- ◇ Interpreting the electron configuration of an atom or atomic ion
- ◇ Interpreting the electron configuration of an atom or atomic ion in noble-gas notation
- ◇ Writing the electron configuration of an atom or atomic ion with s and p electrons only
- ◇ Identifying the electron added or removed to form an ion from an s or p block atom
- ◇ Identifying the electron added or removed to form an ion
- ◇ Predicting the relative ionization energy of elements
- ◇ Deducing valence electron configuration from trends in successive ionization energies
- ◇ Ranking the screening efficacy of atomic orbitals
- ◇ Understanding periodic trends in effective nuclear charge
- ◇ Deducing the block of an element from an electron configuration
- ◇ Calculating the wavelength of a spectral line from an energy diagram
- ◇ Calculating the wavelength of a line in the spectrum of hydrogen
- ◇ Counting electron pairs in a Lewis structure with double or triple bonds
- ◇ Counting valence electrons in a molecule or polyatomic ion
- ◇ Calculating formal charge
- ◇ Recognizing exceptions to the octet rule
- ◇ Writing Lewis structures for an expanded valence shell central atom
- ◇ Writing the Lewis structures for a molecule with resonance
- ◇ Drawing Lewis structures for simple organic compounds
- ◇ Predicting bond polarity
- ◇ Predicting the relative ionic character of chemical bonds
- ◇ Identifying a molecule with one central atom from its 3D shape
- ◇ Using the AXE notation to describe a molecule with a central atom
- ◇ Naming the shape of molecules with one central atom and no octet-rule exceptions
- ◇ Predicting bond angles in molecules with one central atom and no octet-rule exceptions
- ◇ Predicting and naming the shape of molecules with a central atom
- ◇ Predicting deviations from ideal bond angles
- ◇ Predicting whether molecules are polar or nonpolar
- ◇ Identifying hybridization in a small molecule
- ◇ Counting sigma and pi bonds in a small molecule
- ◇ Identifying carbon hybridization in simple organic molecules
- ◇ Recognizing typical LCAO molecular orbitals
- ◇ Drawing the MO energy diagram for a Period 2 homodiatom
- ◇ Using the MO model to predict bond order and paramagnetism
- ◆ States of Matter (59 topics)
 - ◇ Interconverting pressure and force
 - ◇ Interconverting atmospheres and kilopascals
 - ◇ Interconverting atmospheres and torr
 - ◇ Using the combined gas law
 - ◇ Using Avogadro's Law
 - ◇ Using the ideal equation of state
 - ◇ Interconverting molar mass and density of ideal gases
 - ◇ Calculating mole fraction in a gas mixture
 - ◇ Calculating partial pressure in a gas mixture
 - ◇ Solving for a gaseous reactant
 - ◇ Understanding how average molecular kinetic energy scales with temperature
 - ◇ Predicting how molecular speed distribution changes with temperature and molar mass
 - ◇ Calculating average molecular speed
 - ◇ Using relative effusion rates to find an unknown molar mass

- ◇ Using thermodynamic state to order the ideality of gases
- ◇ Identifying the origin of nonideality in a gas
- ◇ Understanding the origin of the van der Waals equation of state
- ◇ Using the van der Waals equation of state
- ◇ Identifying a molecule from its electrostatic potential map
- ◇ Identifying the important intermolecular forces in pure compounds
- ◇ Understanding the connection between vapor pressure, boiling point, and enthalpy of vaporization
- ◇ Calculating vapor pressure from boiling point and enthalpy of vaporization
- ◇ Calculating enthalpy of vaporization from vapor pressure
- ◇ Predicting the relative stability of ionic crystals from a sketch
- ◇ Predicting the relative lattice energy of binary ionic compounds
- ◇ Interpreting a Born–Haber cycle
- ◇ Drawing the unit cell of a 2D lattice
- ◇ Counting the atoms in a unit cell
- ◇ Recognizing and naming close–packed crystal lattices
- ◇ Recognizing and naming lattices with cubic unit cells
- ◇ Calculating key distances in the fcc unit cell
- ◇ Calculating key distances in the bcc unit cell
- ◇ Finding an atomic radius from an fcc or bcc lattice constant
- ◇ Finding density from an fcc or bcc lattice constant
- ◇ Labeling a typical simple phase diagram
- ◇ Using a phase diagram to find a phase transition temperature or pressure
- ◇ Sketching a described thermodynamic change on a phase diagram
- ◇ Interpreting a heating curve
- ◇ Drawing a heating curve
- ◇ Calculating mass percent composition
- ◇ Using mass percent composition to find solution volume
- ◇ Calculating volume percent composition
- ◇ Finding mass or volume from percent concentration
- ◇ Calculating ionic solution composition in equivalents
- ◇ Solving applied equivalents composition problems
- ◇ Calculating molality
- ◇ Calculating mole fraction
- ◇ Calculating solubility
- ◇ Using solubility to calculate solute mass or solution volume
- ◇ Understanding conceptual components of the enthalpy of solution
- ◇ Using Henry's Law to calculate the solubility of a gas
- ◇ Predicting the relative heat of hydration of ions
- ◇ Using the K_f and K_b equations
- ◇ Using the K_f and K_b equations with electrolytes
- ◇ Calculating and using the van't Hoff factor for electrolytes
- ◇ Using osmotic pressure to find molar mass
- ◇ Using a solution freezing point to calculate a molar mass
- ◇ Using Raoult's Law to calculate the vapor pressure of a component
- ◇ Calculating ideal solution composition after a distillation
- ◆ Kinetics and Equilibrium (51 topics)
 - ◇ Calculating the reaction rate of one reactant from that of another
 - ◇ Using a rate law
 - ◇ Using reactant reaction order to predict changes in initial rate
 - ◇ Deducing a rate law from initial reaction rate data
 - ◇ Calculating the change in concentration after a whole number of half–lives of a first–order reaction
 - ◇ Using a zero order integrated rate law to find concentration change
 - ◇ Using an integrated rate law for a first–order reaction

- ◇ Using a second–order integrated rate law to find concentration change
- ◇ Using first– and second–order integrated rate laws
- ◇ Deducing a rate law from the change in concentration over time
- ◇ Finding half life and rate constant from a graph of concentration versus time
- ◇ Solving applied problems with first–order kinetics
- ◇ Interpreting a reaction energy diagram
- ◇ Relating activation energy to reaction rate
- ◇ Drawing the reaction energy diagram of a catalyzed reaction
- ◇ Understanding the qualitative predictions of the Arrhenius equation
- ◇ Using the Arrhenius equation to calculate k at one temperature from k at another
- ◇ Using the Arrhenius equation to calculate E_a from k versus T data
- ◇ Identifying the molecularity of an elementary reaction
- ◇ Identifying intermediates in a reaction mechanism
- ◇ Writing a plausible missing step for a simple reaction mechanism
- ◇ Writing the rate law of an elementary reaction
- ◇ Writing the rate law implied by a simple mechanism with an initial slow step
- ◇ Expressing the concentration of an intermediate in terms of the concentration of reactants
- ◇ Writing the rate law implied by a simple mechanism
- ◇ Deducing information about reaction mechanisms from a reaction energy diagram
- ◇ Understanding that no reaction goes to 100% completion
- ◇ Predicting relative forward and reverse rates of reaction in a dynamic equilibrium
- ◇ Using Le Chatelier's Principle to predict the result of changing concentration
- ◇ Writing a pressure equilibrium constant expression
- ◇ Writing the concentration equilibrium expression for a heterogeneous equilibrium
- ◇ Writing the pressure equilibrium expression for a heterogeneous equilibrium
- ◇ Calculating an equilibrium constant from a heterogeneous equilibrium composition
- ◇ Using the general properties of equilibrium constants
- ◇ Interconverting K_p and K_c
- ◇ Writing an equilibrium constant for a reaction sequence
- ◇ Setting up a reaction table
- ◇ Calculating equilibrium composition from an equilibrium constant
- ◇ Using the small x approximation to solve equilibrium problems
- ◇ Calculating an equilibrium constant from a partial equilibrium composition
- ◇ Calculating an equilibrium composition after a prior equilibrium determines K
- ◇ Solving problems that mix equilibrium ideas with gas laws
- ◇ Using the van't Hoff equation to predict K at a different temperature
- ◇ Writing a solubility product (K_{sp}) expression
- ◇ Using K_{sp} to calculate the solubility of a compound
- ◇ Using the solubility of a compound to calculate K_{sp}
- ◇ Calculating the solubility of an ionic compound when a common ion is present
- ◇ Understanding the effect of pH on the solubility of ionic compounds
- ◇ Writing a complex ion formation constant expression
- ◇ Using K_f to calculate the equilibrium molarity of a complex
- ◇ Calculating the solubility of an ionic compound when a complex may form
- ◆ Acids and Bases (32 topics)
 - ◇ Predicting acid or base strength from the conjugate
 - ◇ Predicting the products of the reaction of a strong acid with water
 - ◇ Predicting the reactants of a neutralization reaction
 - ◇ Predicting the qualitative acid–base properties of salts
 - ◇ Predicting the qualitative acid–base properties of metal cations
 - ◇ Identifying Lewis acids and bases in reactions
 - ◇ Predicting the acid–base properties of a binary oxide in water
 - ◇ Naming inorganic acids

- ◇ Deducing the formulae of inorganic acids from their names
- ◇ Naming acid salts
- ◇ Predicting the relative acidity of binary acids
- ◇ Understanding the effect of induction on acidity
- ◇ Interconverting pH and pOH at 25°C
- ◇ Interconverting hydronium and hydroxide concentration at 25°C
- ◇ Diluting a strong acid solution to a given pH
- ◇ Preparing a strong base solution with a given pH
- ◇ Calculating the K_a of a weak acid from pH
- ◇ Calculating the pH of a weak acid solution
- ◇ Writing a base protonation constant expression
- ◇ Calculating the pH of a weak base solution
- ◇ Deriving K_b from K_a
- ◇ Calculating the pH of a salt solution
- ◇ Calculating percent dissociation of a weak acid
- ◇ Understanding connections between descriptions of weak acid dissociation
- ◇ Calculating the pH of a dilute acid solution
- ◇ Writing the dissociation reactions of a polyprotic acid
- ◇ Solving a polyprotic acid equilibrium composition problem
- ◇ Calculating the pH of a weak acid titrated with a strong base
- ◇ Calculating the pH of a weak base titrated with a strong acid
- ◇ Calculating the pH at equivalence of a titration
- ◇ Setting up a reaction table for a pH calculation with a common ion
- ◇ Calculating the composition of a buffer of a given pH
- ◆ Entropy and Free Energy (19 topics)
 - ◇ Calculating entropy change from reversible heat flow
 - ◇ Calculating absolute entropy using the Boltzmann hypothesis
 - ◇ Calculating entropy change using the Boltzmann hypothesis
 - ◇ Predicting qualitatively how entropy changes with temperature and volume
 - ◇ Predicting qualitatively how entropy changes with mixing and separation
 - ◇ Qualitatively predicting reaction entropy
 - ◇ Using the Second Law to predict spontaneous change
 - ◇ Calculating reaction entropy using the standard molar entropies of reactants
 - ◇ Using the general properties of Gibbs free energy
 - ◇ Calculating dG from dH and dS
 - ◇ Using the conditions of spontaneity to deduce the signs of H and S
 - ◇ Calculating standard reaction free energy from standard free energies of formation
 - ◇ Estimating a phase transition temperature from standard thermodynamic data
 - ◇ Interconverting standard Gibbs free energy and K
 - ◇ Using thermodynamic data to calculate K
 - ◇ Recognizing consistency between statements about standard Gibbs free energy
 - ◇ Using the maximum work theorem with chemical work
 - ◇ Calculating reaction free energy under nonstandard conditions
 - ◇ Using reaction free energy to predict equilibrium composition
- ◆ Electrochemistry (20 topics)
 - ◇ Writing a simple half–reaction from its description
 - ◇ Writing the half–reactions of a metal–nonmetal reaction
 - ◇ Writing the half–reactions of a single–displacement reaction
 - ◇ Writing and balancing complex half–reactions in acidic solution
 - ◇ Writing and balancing complex half–reactions in basic solution
 - ◇ Balancing a complex redox equation in acidic or basic solution
 - ◇ Writing the half–reactions of a complex redox reaction in acidic or basic solution
 - ◇ Designing a galvanic cell from a single–displacement redox reaction

- ◇ Designing a galvanic cell from two half-reactions
- ◇ Analyzing a galvanic cell
- ◇ Picking a reduction or oxidation that will make a galvanic cell work
- ◇ Ranking the strength of oxidizing and reducing agents using standard reduction potentials
- ◇ Calculating standard reaction free energy from standard reduction potentials
- ◇ Recognizing consistency among equilibrium constant, free energy, and cell potential
- ◇ Using the Nernst equation to calculate nonstandard cell voltage
- ◇ Understanding concentration cells
- ◇ Using the relationship between charge, current and time
- ◇ Using the Faraday constant
- ◇ Analyzing the electrolysis of molten salt
- ◇ Calculating the mass of an electrolysis product from the applied current
- ◆ Chemistry of the Elements (43 topics)
 - ◇ Understanding main-group periodic trends in ionization energy
 - ◇ Understanding main-group periodic trends in atomic radius
 - ◇ Predicting the common oxidation states of main-group elements
 - ◇ Predicting the hydride formed by a main-group element
 - ◇ Identifying a main-block group from its general properties
 - ◇ Identifying a main-block group from an element oxide
 - ◇ Identifying a main-block group from an element halide
 - ◇ Assessing the consistency of statements relating to main-group valence electron configuration
 - ◇ Identifying Group 3A elements
 - ◇ Identifying Group 4A elements
 - ◇ Identifying Group 5A elements
 - ◇ Identifying Group 6A elements
 - ◇ Understanding the chemical formulae of interhalogens
 - ◇ Understanding how halide bond length varies down a main-block group
 - ◇ Ranking the oxidizing power of halogens
 - ◇ Writing the electron configuration of a first transition series atom
 - ◇ Interpreting an outer electron box diagram
 - ◇ Drawing the outer electron box diagram of a transition metal cation
 - ◇ Identifying transition metal cations with a given number of d electrons
 - ◇ Deducing the number of d electrons and unpaired spins in a transition metal cation
 - ◇ Understanding the exceptional electron configurations in the first transition series
 - ◇ Understanding words that describe where transition metals lie in the Periodic Table
 - ◇ Predicting the relative atomic radius of a transition metal atom
 - ◇ Predicting the relative density of a transition metal
 - ◇ Predicting the relative melting point of a transition metal
 - ◇ Predicting the highest common oxidation state of a metal in the first transition series
 - ◇ Predicting the reaction of a transition metal with a strong acid
 - ◇ Writing the formula of a metal complex from its description
 - ◇ Recognizing typical metal ligands
 - ◇ Determining the oxidation state of the metal in a complex ion
 - ◇ Naming complex cations with one type of ligand
 - ◇ Naming complex anions with one type of ligand
 - ◇ Naming complex ions
 - ◇ Determining the oxidation state of the metal in a coordination compound
 - ◇ Naming coordination compounds
 - ◇ Determining the coordination number of a metal in a complex
 - ◇ Understanding the connection between geometry and coordination number of a metal complex
 - ◇ Distinguishing isomers and alternate views of a metal complex
 - ◇ Drawing an isomer of a metal complex
 - ◇ Drawing cis and trans isomers of a metal complex

- ◇ Adding electrons to a crystal field theory energy level diagram
- ◇ Predicting color and magnetic properties from a crystal field theory energy level diagram
- ◇ Drawing a crystal field theory energy level diagram
- ◆ Nuclear Chemistry (5 topics)
 - ◇ Interconverting amount of radioactive decay and half life
 - ◇ Calculating radioactive activity from half life
 - ◇ Using isotope ratios to radiodate
 - ◇ Using activity to radiodate
 - ◇ Knowing units of radiation dosage and exposure
- ◆ Organic Chemistry (69 topics)
 - ◇ Identifying rigid parts of an acyclic organic molecule
 - ◇ Identifying hydrophobic and hydrophilic parts of an organic molecule
 - ◇ Interpreting condensed chemical structures with benzene rings
 - ◇ Drawing a skeletal structure from a condensed structure
 - ◇ Interpreting a skeletal structure with aromatic rings
 - ◇ Understanding H atoms in a skeletal structure
 - ◇ Comparing skeletal structures related by one fewer bond
 - ◇ Using wedges and dashes in skeletal structures
 - ◇ Identifying the main chain of branched alkanes
 - ◇ Naming the parent hydrocarbon of branched alkanes
 - ◇ Naming alkyl side chains
 - ◇ Identifying organic functional groups
 - ◇ Using family suffixes to name organic compounds
 - ◇ Numbering the main chain of branched alkanes
 - ◇ Naming and drawing small alkyl substituents
 - ◇ Naming and drawing alkyl and alkoxy substituents
 - ◇ Drawing the condensed structure of a constitutional isomer
 - ◇ Drawing the skeletal structure of a constitutional isomer
 - ◇ Identifying a chiral molecule from its condensed structure
 - ◇ Identifying chiral centers in a cyclic molecule
 - ◇ Drawing the mirror image of a simple organic molecule
 - ◇ Identifying the enantiomer of a simple organic molecule
 - ◇ Classifying organic reactions
 - ◇ Recognizing organic acids and bases
 - ◇ Deducing oxidation state from a Lewis structure
 - ◇ Naming branched alkanes
 - ◇ Using multiplying affixes in the names of branched alkanes
 - ◇ Naming and drawing branched alkanes
 - ◇ Naming and drawing simple substituted cycloalkanes
 - ◇ Naming unbranched alkenes and alkynes
 - ◇ Naming alkenes and alkynes
 - ◇ Identifying cis/trans isomerism in a skeletal structure
 - ◇ Drawing the cis or trans isomer of a small alkene
 - ◇ Naming benzene derivatives
 - ◇ Predicting the reactants or products of alkene hydration
 - ◇ Naming alkyl halides
 - ◇ Naming and drawing alkyl halides
 - ◇ Naming alcohols
 - ◇ Naming and drawing thiols without alkyl side groups
 - ◇ Naming and drawing alcohols
 - ◇ Identifying primary, secondary, and tertiary alcohols
 - ◇ Identifying common alcohols from a description
 - ◇ Predicting the products of symmetric alcohol dehydration

- ◇ Predicting the reactants or products of alcohol oxidation
- ◇ Understanding the common names of simple ethers
- ◇ Understanding the common names of simple ketones
- ◇ Naming and drawing ketones
- ◇ Naming and drawing aldehydes
- ◇ Predicting the reactants or products of alcohol and aldehyde oxidation
- ◇ Predicting the reactants or products of carbonyl reduction
- ◇ Identifying and drawing hemiacetals and acetals
- ◇ Predicting the reactants or products of hemiacetal and acetal formation
- ◇ Predicting the reactants or products of acetal hydrolysis
- ◇ Understanding the common names of simple amines
- ◇ Identifying primary, secondary, and tertiary amines
- ◇ Naming and drawing primary amines without alkyl side groups
- ◇ Naming and drawing secondary and tertiary amines
- ◇ Naming aldehydes and acids
- ◇ Understanding the names of carboxylate salts
- ◇ Naming and drawing unsubstituted esters
- ◇ Identifying primary, secondary, and tertiary amides
- ◇ Naming and drawing unsubstituted amides
- ◇ Identifying positions labeled with Greek letters in acids and derivatives
- ◇ Knowing the common names of small diacids
- ◇ Predicting the reactants or products of esterification
- ◇ Predicting the reactants or products of ester hydrolysis
- ◇ Predicting the products of ester saponification
- ◇ Predicting the reactants or products of amidation
- ◇ Predicting the products of amide hydrolysis
- ◆ Biochemistry (70 topics)
 - ◇ Understanding the descriptive vocabulary of monosaccharides
 - ◇ Drawing the Fischer projection of the enantiomer of a monosaccharide
 - ◇ Drawing the Haworth projection of an aldose from its Fischer projection
 - ◇ Drawing the Haworth projection of a ketose from its Fischer projection
 - ◇ Naming and drawing cyclic monosaccharides
 - ◇ Identifying a given carbon in a cyclic monosaccharide
 - ◇ Naming and drawing the products of aldose oxidation and reduction
 - ◇ Identifying the parts of a disaccharide
 - ◇ Knowing the names and properties of common sugars
 - ◇ Identifying common polysaccharides
 - ◇ Understanding the glycosidic links in common polysaccharides
 - ◇ Understanding the basic descriptive vocabulary of fatty acids
 - ◇ Understanding lipid number notation
 - ◇ Understanding melting points trends of fatty acids
 - ◇ Identifying the components of wax esters
 - ◇ Identifying the parts of a triacylglycerol
 - ◇ Identifying the parts of a glycerophospholipid
 - ◇ Identifying the parts of a sphingomyelin
 - ◇ Identifying molecules that could be in a cell membrane
 - ◇ Recognizing the steroid nucleus
 - ◇ Classifying lipids derived from fatty acids
 - ◇ Matching structure and function of common lipids
 - ◇ Predicting the products or reactants of triacylglycerol hydrogenation
 - ◇ Predicting the products or reactants of triacylglycerol hydrolysis or saponification
 - ◇ Recognizing alpha amino acids
 - ◇ Classifying amino acids

- ◇ Identifying the stereochemistry of natural amino acids
- ◇ Understanding the general acid–base properties of amino acids
- ◇ Identifying and drawing peptide bonds
- ◇ Describing peptides with 3–letter codes
- ◇ Identifying specific interactions between residues in a protein
- ◇ Predicting the location in a protein of a residue sequence
- ◇ Naming an element of protein secondary structure from a description
- ◇ Identifying changes at different levels of protein structure
- ◇ Recognizing nucleotides
- ◇ Numbering the carbons in nucleotides
- ◇ Naming and drawing nucleosides
- ◇ Naming and drawing nucleotides
- ◇ Understanding the arrangement of hydrogen bonds in DNA base pairs
- ◇ Understanding the structure of nucleic acid strands
- ◇ Writing complementary DNA sequences
- ◇ Understanding that DNA replication is semiconservative
- ◇ Identifying the major types of RNA from a description
- ◇ Understanding the relationship between DNA and mRNA base sequences
- ◇ Using the genetic code
- ◇ Classifying mutations
- ◇ Predicting reactants or products of phosphorylation
- ◇ Predicting the products of phosphoester or phosphoanhydride hydrolysis
- ◇ Understanding major biochemical energy storage and release reactions
- ◇ Identifying common redox coenzymes by their roles in a reaction
- ◇ Understanding the formation and hydrolysis of acyl–CoA
- ◇ Knowing basic facts about enzymes
- ◇ Classifying enzymes
- ◇ Identifying reactants and products from an enzyme name
- ◇ Understanding basic models of competitive and noncompetitive inhibition
- ◇ Predicting the effect of temperature or pH on enzyme activity
- ◇ Understanding the biochemistry of digestion
- ◇ Knowing inputs and outputs of the citric acid cycle
- ◇ Understanding the general mechanism of oxidative phosphorylation
- ◇ Solving citric acid cycle ATP stoichiometry problems
- ◇ Knowing inputs and outputs of glycolysis
- ◇ Completing a simplified diagram of glycolysis
- ◇ Completing a simplified diagram of glucose catabolism
- ◇ Solving carbohydrate catabolic stoichiometry problems
- ◇ Knowing the steps of beta oxidation
- ◇ Predicting the product of beta oxidation activation
- ◇ Knowing inputs and outputs of beta oxidation
- ◇ Solving fatty acid catabolic stoichiometry problems
- ◇ Predicting the products of catabolic amino acid transamination
- ◇ Completing a diagram of protein catabolism

***Other Topics Available** *By default, these topics are NOT included in the course, but can be added using the content editor in the Teacher Module.*
